Assessment / Plan

Dear Dr Louis

I had the pleasure of seeing Crystal, patient with type 1 DM, fairly controlled, A1C ~ 7.3% Today in office. Dexcom was G6 showed an average BG ~ 188 with 51%

Patient is interested in afrezza, we did discuss the side effects and I showed her a Video and the method of use, she is not as interested.

We did discuss the insulin pump and she seems interested but will think about

Plan:

start Tresiba 36 units at bedtime (sample given, but call if she would rather use it)
stop Levemir
Lower Novolog to 16 units TID AC meals
restart atorvastatin 10 mg daily
will call if she interested in insulin pump
follow up in 3 months

Plan was discussed with the patient and she expressed understanding

Thank you for allowing me to participate in the care of your patient
