MAMMO UNI SCREENING

DIGITAL CAD IF INCLUDED

Patient History: Patient has history of cancer in the right breast at age 39 and had previous chemotherapy at age 39. Malignant mastectomy

of the right breast, 1985.

Reason for Exam: Screening.

Comparison: 4/27/15, 1/25/13 - MMCI.

Left Breast Digital Screening Tomosynthesis Mammography, Analyzed by
CAD

Findings: Digital mammography was performed. Standard mammographic views were obtained. The breast tissue is predominantly fat density. There are no suspicious masses, calcifications or other significant findings.

Impression: There is no mammographic evidence of malignancy.

Recommendation: Annual screening mammography.

BIRADS: Negative (1).

Result Notes

Notes Recorded by Marcie A Beckstead, RN on 8-25-18 at 1:35 PM
Patient notified of result & recommendations. Verbalized understanding.

Notes Recorded by Kristina E Corso, DO on 8-25-18 at 5:31 PM
Please inform patient of normal mammogram, please repeat yearly. She will need a repeat HgA1c after September and to establish with a new provider. Thanks, KC
